

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (Original) An air induction body assembly for a vehicle, comprising:
 - a carrier having a first sealing interface for a manifold and a second sealing interface for an engine cylinder;
 - at least one air opening extending through said carrier, said at least one air opening for communicating air to the engine cylinder; and
 - at least one valve mounted to said carrier, said at least one valve for controlling the communication of air through said at least one opening.
2. (Currently Amended) The air induction body assembly of Claim 1 wherein said valve comprises a flap, said flap pivotally mounted to said carrier by a shaft.
- 3-5. (Cancelled)
6. (Currently Amended) The air induction body assembly of Claim 3-2 wherein said shaft is mounted on said carrier by a bearing surface.
7. (Original) The air induction body assembly of Claim 6 wherein said bearing surface comprises a ball bearing.

8. (Original) The air induction body assembly of Claim 6 wherein said bearing surface comprises a sleeve.

9. (Original) The air induction body assembly of Claim 1 including an actuator for controlling said at least one valve, said actuator mounted to said carrier.

10. (Original) The air induction body assembly of Claim 1 including at least one seal disposed on one of said first sealing interface and said second sealing interface.

11. (Currently Amended) The air induction body assembly of Claim 1 wherein said at least one air opening comprises a plurality of air openings and said at least one valve comprises a plurality of valves for controlling air through said plurality of air openings, and including a shaft interconnecting said plurality of valves.

12. (Original) The air induction body assembly of Claim 1 wherein said carrier has a support for a fuel injector.

13. (Original) The air induction body assembly of Claim 12 including a fuel injector supported by said support.

14. (Original) The air induction body assembly of Claim 12 including at least one wire embedded in said carrier to power said fuel injector.

15. (Currently Amended) An air induction manifold assembly for a vehicle, comprising:

an air induction manifold having at least one manifold air passage;

a carrier having at least one carrier air passage in communication with said at least one manifold air passage, said air passages for communicating air to an engine;

said carrier having a first sealing interface for a manifold and a second sealing interface for an engine cylinder, said first sealing interface for sealing the communication of air between said at least one manifold air passage and said at least one carrier air passage; and

at least one valve mounted to said carrier, said at least one valve for controlling the communication of air through said at least one opening~~carrier~~ air passage.

16. (Original) The air induction manifold assembly of Claim 15 wherein said valve comprises a flap.

17. (Original) The air induction manifold assembly of Claim 16 wherein said flap is pivotally mounted to said carrier by a shaft.

18. (Original) The air induction manifold assembly of Claim 15 including an actuator for controlling said at least one valve, said actuator mounted to said carrier.

19. (Currently Amended) The air induction body-manifold assembly of Claim 15 including a fuel injector supported by said carrier, said carrier having a thickness less than a length of said fuel injector.

20. (Cancelled)

21. (New) The air induction body assembly of Claim 13 wherein said fuel injector has a length and said carrier has a thickness, said thickness less than said length.

22. (New) The air induction body assembly of Claim 13 wherein said fuel injector has a discharge end portion for discharging fuel spaced from a receiving end portion for receiving fuel, said at least one valve located closer to said discharge end portion for discharging fuel than to said receiving end portion for receiving fuel.

23. (New) The air induction body assembly of Claim 22 wherein said at least one valve is located proximate said discharge end portion for discharging fuel.

24. (New) The air induction manifold assembly of Claim 15 including a first seal for said first sealing interface and a second seal for said second sealing interface.

25. (New) The air induction manifold assembly of Claim 19 wherein said fuel injector has a discharge end portion for discharging fuel and a receiving end portion for receiving fuel, said at least one valve located closer to said discharge end portion for discharging fuel than to said receiving end portion for receiving fuel.

26. (New) An air induction body assembly for a vehicle, comprising:

a carrier having a first sealing interface for a manifold and a second sealing interface for an engine cylinder;

at least one air opening extending through said carrier, said at least one air opening for communicating air to the engine cylinder;

at least one valve mounted to said carrier, said at least one valve for controlling the communication of air through said at least one air opening;

said carrier having a support for a fuel injector;

a fuel injector supported by said support; and

said fuel injector having a discharge end portion for discharging fuel spaced from a receiving end portion for receiving fuel, said at least one valve located closer to said discharge end portion for discharging fuel than to said receiving end portion for receiving fuel.
